

### Year 5 Marvellous Mixtures Knowledge Organiser

States Of Matter					
State	Solid	Liquid	Gas		
Diagram					
Arrangement of particles	Regular arrangement	Randomly arranged	Randomly arranged		
Movement of particles	Vibrate about a fixed position	Move around each other	Move quickly in all directions		
Closeness of particles	Very close	Close	Far apart		

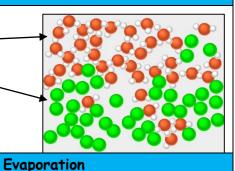

#### Dissolving

When the particles in a solid spread out in a liquid.

We call the liquid the **SOLVENT** 

We call the solid the SOLUTE

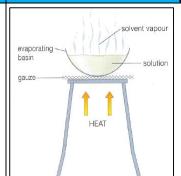

We call the mixture of the solid and the liquid a **SOLUTION**. A solid that will dissolve in a liquid is called **SOLUBLE**. A solid that will not dissolve in a liquid is called **INSOLUBLE**.

	Filtrati
	(
liquid and insoluble	solid
filter paper	
filter funnel	
	filtered solid - residue
filtered liquid - filtrate	

# Separates an insoluble solid from a liquid.

The solid pieces are too big to fit through the holes in the filter paper.

Separating a soluble solid from a liquid.

### Crystallisation

Heat until almost all the water has evaporated.
Leave for the remaining water to evaporate slowly to form crystals.

Key Vocabulary			
dissolve	Pass into a solution.		
evaporate	Change into a vapour.		
filter	Remove by passing through		
	a filter.		
mixture	A substance consisting of		
	two or more substances		
	mixed together.		
non-reversible	Incapable of being		
	reversed into a different		
	state.		
particle	A tiny piece of anything.		
reversible	Capable of assuming or		
	producing either of two		
	states.		
saturated	Being the most		
	concentrated solution		
	possible at a given		
	temperature; unable to		
	dissolve still more of a		
	substance.		
separate	Force, take, or pull apart.		
soluble	Capable of being dissolved		
	in some solvent.		
solution	A mixture of two or more		
	substances; frequently (but		
	not necessarily) a liquid		
	solution.		
suspension	A mixture in which fine		
	particles are suspended in a		
	fluid where they are		
	supported by buoyancy.		

## Year 5 All Change Knowledge Organiser

States Of Matter				
State	Solid	Liquid	Gas	
Diagram				
Arrangement of particles	Regular arrangement	Randomly arranged	Randomly arranged	
Movement of particles	Vibrate about a fixed position	Move around each other	Move quickly in all directions	
Closeness of particles	Very close	Close	Far apart	
	Melting	Evaporating or boiling  Condensing		
Solid	Liq		Gas	
	Reversible Changes		Irreversible Changes	
Some changes can be reversed and the material can be changes to its previous form.  An example of this is water into ice – it can be melted and turn back to water again.		Other changes are irreversible which means they can't be 'undone'. Examples of this are cooking, baking, frying and burning materials. A example would be that you can fry an egg but you can't return it to a raw egg again.		

Key Vocabulary		
bubbles	A hollow globule of gas	
	(e.g., air or carbon	
	dioxide).	
carbon dioxide	A heavy odourless	
	colourless gas formed	
	during respiration.	
freeze	Change from a liquid to	
	a solid when cold.	
flammable	Easily ignited.	
fuel	A substance that can	
	be consumed to	
	produce energy.	
melt	Reduce or cause to be	
	reduced from a solid to	
	a liquid state, usually	
	by heating.	
irreversible	Incapable of being	
	reversed into a	
	different state.	
oxygen	A colourless, odourless,	
	tasteless, non-	
	flammable gas that we	
	breathe.	
reaction	A process in which one	
	or more substances are	
	changed into others.	
reversible	Capable of assuming or	
	producing either of	
	two states.	
vapour	A visible suspension in	
	the air of particles of	
	some substance.
